Network Operations Center

SECURITY EXPERTISE

No small business can keep up with the growth in cyber-crime, spyware, new viruses and other threats to internet connected PCs and servers. Anti-CyberCrime Managed Security automatically monitors and protects the security of your customer's desktops, laptops and file servers making it possible for just one technician to service hundreds of small businesses.

COMPREHENSIVE PROTECTION

Anti-CyberCrime Managed Security protects against a wide variety of malware—viruses, worms, Trojans, spyware, adware, dialers, hacking tools, keyloggers, hoaxes, jokes and system vulnerabilities.

ALWAYS UP-TO-DATE PROTECTION

Replace your customer's current antivirus software with a lightweight security client that provides complete antimalware protection on that system. Your customers will never suffer a malware infestation because they unwittingly allowed protection to fall out of date.

NO HARDWARE TO BUY

All you need is an internet connection to get started.
